

2-Color Reagent anti-human CD4/CD8

Premixed Antibody Combination

FITC conjugated anti human **CD4** (EDU-2; mouse IgG2a)
PE conjugated anti human **CD8** (MEM-31; mouse IgG2a)

Cat-No: **21452003**

500 µl

Specificity of CD4: The antibody EDU-2 recognizes CD4 antigen, a 55 kDa transmembrane glycoprotein expressed on a subset of T lymphocytes ("helper" T-cells) and also on monocytes, tissue macrophages and granulocytes

Specificity of CD8: The antibody MEM-31 recognizes a conformationally-dependent epitope of CD8

Form: The anti-human CD3 antibody UCHT-1 is conjugated with Fluorescein isothiocyanate (FITC).
The anti-human CD8 antibody MEM-31 is conjugated with R-Phycoerythrin (R-PE).

Physical state: Liquid

Buffer/Additives/Preservative: PBS containing BSA and 0.09% sodium azide (pH 7.2).

Expiration date: The reagent is stable until the expiry date stated on the vial label.

Storage conditions: Store at 4 °C. Do not freeze. Avoid prolonged exposure to light.

Application: Flow Cytometry, 500µl = 25 tests

Warning: Sodium azide is harmful if swallowed (R22). Keep out of reach of children (S2). Keep away from food, drink and animal feeding stuff (S13). Wear suitable protective clothing (S36). If swallowed, seek medical advice immediately and show this container or label (S46). Contact with acids liberates very toxic gas (R32). Azide compounds should be flushed with large volumes of water during disposal to avoid deposits in lead or copper plumbing where explosive conditions can develop.

This material is offered for **research use only**. Not for use in human. For in vitro use only. ImmunoTools will not be held responsible for patent infringement or other violations that may occur with the use of our products.

Attention! Cells from one healthy individual are shown. Cell populations and staining intensity may vary interindividually.
