Recombinant Human Interferon-alpha 2beta (rh IFN-alpha 2b)

Synonyms: IFNA, INFA2, MGC125764, MGC125765

Introduction: Interferons are cytokines that are widely known to induce potent anti-viral activity. Interferon-a exerts a variety of other biological effects, including antitumor and immunomodulatory activities and are increasingly used clinically to treat a range of malignancies, myelodysplasias and autoimmune diseases. IFN-alpha is produced by macrophages and has antiviral activities. Interferon stimulates the production of two enzymes: protein kinase and an oligoadenylate synthetase.

Description: Recombinant human IFN-alpha 2b produced in E.Coli is a single, non-glycosylated, polypeptide chain containing 166 amino acids and having a molecular mass of 19.4 kDa. The difference between IFN-alpha 2a and IFN-alpha 2b is the amino acid present at position 23. IFN-alpha 2a has a lysine at that position 23 while IFN-alpha 2b has arginine. The Interferon-alpha 2b gene was obtained from human leukocytes. The rh IFN-alpha 2b is purified by proprietary chromatographic techniques.

Source: Escherichia Coli.

Physical Appearance: Sterile filtered white lyophilized (freeze-dried) powder.

Formulation: Lyophilized from a concentrated solution in containing 2.3 mg sodium phosphate dibasic and 0.55 mg sodium phosphate monobasic buffer. The aliquots/samples of 1µg contain Trehalose 5% (w/vol) for better recovery.

Solubility: It is recommended to reconstitute the lyophilized rh IFN-alpha 2b in sterile H2O not less than 100 µg/ml, which can then be further diluted to other aqueous solutions.

Stability: Lyophilized rh IFN-alpha 2b although stable at room temperature for 3 weeks, should be stored desiccated below -18°C. Upon reconstitution rh IFN-alpha 2b should be stored at 4°C between 2-7 days and for future use below -18°C. For long term storage it is recommended to add a carrier protein (0.1% HSA or BSA). Please prevent freeze-thaw cycles.

Purity: Greater than 98.0% as determined by RP-HPLC and by SDS-PAGE.

Amino acid sequence:
MCDLPQTHSLGSRRTLMLLAQMRRISLFSCLKDRHDFGFPQEEFGNQFQKAETIPVLHEMIQQIFNLFS
STMDSAAWWETDLKDYETLYQQLNDLEAVIQGVVTETPLMKEDSILAVKYFQRTLYLKEKLYSP
CAWEVVRARIEIMRSFSLSTNLQESLRSKE

Biological Activity: The specific activity as determined in a viral resistance assay using bovine kidney MDBK cells was found to be 2.6 x 10^8 IU/mg.

Protein content: Protein quantitation was carried out by two independent methods:
1. UV spectroscopy at 280 nm using the absorbency value of 0.924 as the extinction coefficient for a 0.1% (1mg/ml) solution. This value is calculated by the PC GENE computer analysis program of protein sequences (IntelliGenetics).

This material is offered for research use only. Not for use in human. For in vitro use only. ImmunoTools will not be held responsible for patent infringement or other violations that may occur with the use of our products.
