

anti-rat CD71 FITC-conjugated

FITC- conjugated monoclonal antibody MRC OX-26 to rat CD71

Cat-No: **23150713**

500 µl

Clone: MRC OX-26

Specificity: This anti-rat CD71 antibody recognizes the transferrin receptor. This 95kDa molecule is found on proliferating cells and brain endothelium. This antibody does not block the binding of transferrin to the receptor.

Isotype subclass: Mouse IgG2a

Form: The purified antibody is conjugated with Fluorescein isothiocyanate (FITC) under optimum conditions. The reagent is free of unconjugated FITC and adjusted for direct use. No reconstitution is necessary.

Physical state: Liquid

Buffer/Additives/Preservative: PBS containing 1 % BSA and 0.09 % sodium azide (pH 7.2).

Expiration date: The reagent is stable until the expiry date stated on the vial label.

Storage conditions: Store at 4 °C. Avoid prolonged exposure to light.

Application: Flow Cytometry, Immunoprecipitation, Immunohistochemistry on frozen or paraffin sections

Warning: Sodium azide is harmful if swallowed (R22). Keep out of reach of children (S2). Keep away from food, drink, and animal feedingstuff (S13). Wear suitable protective clothing (S36). If swallowed, seek medical advice immediately and show this container or label (S46). Contact with acids liberates very toxic gas (R32). Azide compounds should be flushed with large volumes of water during disposal to avoid deposits in lead or copper plumbing where explosive conditions can develop.

This material is offered for **research only**. Not for use in human. For in vitro use only. ImmunoTools will not be held responsible for patent infringement or other violations that may occur with the use of our products.
