

anti-human Follicular Dendritic Cells FITC

FITC-conjugated monoclonal antibody BU10 to Follicular Dendritic Cells (Human)

Cat-No: **21488883**

500 µl

Clone: BU10

Specificity: Recognizes a molecule that is expressed on human follicular dendritic cells (FDCs). Follicular dendritic cells are found in the germinal centers of lymphoid organs. The cells have narrow cytoplasmic processes that interdigitate between densely populated areas of B lymphocytes in lymph node follicles and in the spleen

Isotype subclass: Mouse IgGM

Form: The purified antibody is conjugated with Fluoresceinisothiocyanate (FITC) under optimum conditions. The reagent is free adjusted for direct use. No reconstitution is necessary.

Physical state: Liquid

Buffer/Additives/Preservative: PBS containing 1% BSA and 0.09% sodium azide (pH 7.2)

Expiration date: The reagent is stable until the expiry date stated on the vial label.

Storage conditions: Store at 4°C. Avoid prolonged exposure to light.

Background: Follicular dendritic cells are found in the germinal centers of lymphoid organs. The cells have narrow cytoplasmic processes that interdigitate between densely populated areas of B lymphocytes in lymph node follicles and in the spleen.

Warning: Sodium azide is harmful if swallowed (R22). Keep out of reach of children (S2). Keep away from food, drink and animal feeding stuff (S13). Wear suitable protective clothing (S36). If swallowed, seek medical advice immediately and show this container or label (S46). Contact with acids liberates very toxic gas (R32). Azide compounds should be flushed with large volumes of water during disposal to avoid deposits in lead or copper plumbing where explosive conditions can develop.

This material is offered for **research only**. Not for use in human. For in vitro use only. ImmunoTools will not be held responsible for patent infringement or other violations that may occur with the use of our products.
