

anti-human IFN gamma no azide

Monoclonal Antibody B133.5 to IFN gamma (Human)

Cat-No: **21853630**

100 µg in 100 µl

Clone: B133.5

Specificity: The antibody recognizes IFN gamma

Isotype subclass: Mouse IgG1

Physical state: Liquid

Buffer/Additives/Preservative: sterile PBS (pH 7.2).

Form: Purified via Protein G chromatography

Purity: > 95% (by SDS-PAGE)

Expiration date: The reagent is stable until the expiry date stated on the vial label.

Storage conditions: Aliquot and store at -20°C. Avoid freeze/thaw cycles. Should be handled under aseptic conditions.

Application: Western Blot

Background: Interferon-γ is a potent multifunctional cytokine which is secreted primarily by activated NK cells and T cells. Originally characterized based on anti-viral activities, IFN-γ also exerts anti-proliferative, immunoregulatory, and proinflammatory activities. IFN-γ can upregulate MHC class I and II antigen expression by antigen-presenting cells. The B27 antibody reacts with the human interferon-γ. The B27 antibody can neutralize the bioactivity of natural or recombinant IFN-γ.
