

## anti-human Lambda Chain

### Monoclonal Antibody HIg $\lambda$ to Lambda Chain (Human)

Cat-No: **21816071**

100  $\mu$ g in 100  $\mu$ l

**Clone:** HIg $\lambda$

**Specificity:** The antibody HIg $\lambda$  reacts with lambda light chains (22.5 kDa) of human immunoglobulin and does not react with Kappa light chain or heavy chain.

**Isotype subclass:** Mouse IgG1

**Form:** The antibody was purified by affinity chromatography.

**Physical state:** Liquid

**Buffer/Additives/Preservative:** PBS with 0.09% sodium azide (pH 7.2)

**Expiration date:** The reagent is stable until the expiry date stated on the vial label

**Storage conditions:** Store at -20 °C. Avoid freeze/thaw cycles.

**Application:** Flow Cytometry

**Background: Immunoglobulin** classes share the same basic four polypeptide chain structure of two heavy chains (five heavy chains types) and two light chains (kappa, **lambda**; both having a molecular weight of 22.5kDa). Kappa and lambda consist of a variable region and a constant region and can easily be differentiated by the antigenic properties of the constant region. The ratio of kappa to lambda is 70:30. According to literature reports, immunoglobulin bearing Lambda light chains are present on about 40% of normal B lymphocytes.

**Warning:** Sodium azide is harmful if swallowed (R22). Keep out of reach of children (S2). Keep away from food, drink and animal feeding stuff (S13). Wear suitable protective clothing (S36). If swallowed, seek medical advice immediately and show this container or label (S46). Contact with acids liberates very toxic gas (R32). Azide compounds should be flushed with large volumes of water during disposal to avoid deposits in lead or copper plumbing where explosive conditions can develop.
